New HIV diagnoses among heterosexual males, by heterosexual exposure category, Victoria, 2002 - 2006

- 39% Sex with IDU
- 15% Sex with person from a high prevalence country*
- 7% Sex with a person with HIV with no specified exposure
- 1% Heterosexual exposure not otherwise specified
- 38% Person is from a high prevalence country*

* High Prevalence Country (include those countries in sub-Saharan Africa, Cambodia, Myanmar, and certain countries within the Caribbean where the adult HIV prevalence is >1% and HIV is transmitted predominantly by heterosexual contact).
New HIV diagnoses among heterosexual females, by heterosexual exposure category, Victoria, 2002 - 2006

- Sex with bisexual man: 42%  
- Sex with IDU: 17%  
- Sex with person from a high prevalence country*: 13%  
- With a person with HIV with no specified exposure: 9%  
- Heterosexual exposure not otherwise specified: 5%  
- Person is from a high prevalence country*: 5%  

*High Prevalence Country (include those countries in sub-Saharan Africa, Cambodia, Myanmar, and certain countries within the Caribbean where the adult HIV prevalence is >1% and HIV is transmitted predominantly by heterosexual contact).
New HIV diagnoses by time between HIV diagnosis and negative test and/or seroconversion illness, by exposure category, Victoria, 2002 - 2006

Percentage

Exposure category
- Negative result less than a year ago
- Negative result 1 to less than 3 years ago
- Negative result more than 3 years ago
- No previously known negative test or unknown
