Section 5 contents summary

Section 5 of the VINAH manual specifies the technical requirements of data transmissions that are to be made to the Department. The sub-sections of this document are as such:

**Section 5a – Transmission and compliance**
An overview of the VINAH transmission process. Outlines the requirements for the frequency of transmission and correcting of errors, and other policies.

**Section 5b – VINAH transaction implementation guide**
Guidance for software vendors in implementing VINAH capabilities into their systems.

**Section 5c – HL7 reference and implementation guide**
Guidance for software vendors in assembling HL7 transmission files. Contains a definitive reference of the HL7 message definitions for use in conjunction with the Data Element Binding Table.

**Section 5d – HealthCollect Portal manual transmission process**
The process for users to manually transmit VINAH data to the Department using the HealthCollect Portal.

**Section 5e – Submission purge procedure**
Guidance for users and software vendors on purging submissions from the VINAH repository. Contains information for vendors to automate purges within their system.

*The following appendices can be downloaded from the HDSS website:*

**Appendix A – Data element and binding table**
This electronic file contains a list of data elements as listed in Section 3, and binds them to a location within a VINAH transmission.
