

Game Changer

Evolving our approach to prevention

Join a diverse range of Australian and international health promotion and population health practitioners, policy makers and researchers for an interactive event exploring in-depth the implementation of complex community-based preventive health interventions.

As practitioners, policy makers and researchers, we have seen prevention evolve from small scale, single-focus projects, through to broader, settings-based or whole of community-based interventions.

We are now looking at the further evolution of prevention. We are building on the experiences of the past to create a new approach – an integrated, multi-level, systems approach to prevention.

Is this evolution of prevention a game changer?

Game Changer is a chance to explore the reframing of prevention and investigate new ways of thinking and applying knowledge.

This is an opportunity to contribute to the broader dialogue on the design, implementation and evaluation of broad-based approaches to tackle rising obesity and chronic disease.

When: Friday 29 November 2013 – 9am–5pm

Where: Grand Hyatt, 123 Collins Street, Melbourne

Cost: \$250 / \$150 students

Registration and enquiries: www.co-ops.net.au/pages/game_changer.aspx

Please register by 18 November 2013.

Who should attend?

Health promotion and population health practitioners, policy makers, health and social planners from across government, the private sector, not-for-profits and academia.

Official Academic Symposium of the 2013 World Diabetes Congress. Melbourne, 2–6 December 2013
