## **Waxyellooyinka guud oo dhinac socda tallaalka waxay dhacaan tallaalka ka dib waxayna dhamaadaan 1 ilaa 2 maal mood.**

### Tallaalada waxay keeni karaan falcelinada soo socda:

Qandho fudud (<38.5 °C)  
oo aan muddo dheer sii  
socon

Barabaro, aan  
daganeyn, aan  
faraxsanayn ama  
hurdaysan

Halkii cirbadda lagu mudey:  
xanuun, casaan, hurid,  
gubasho, cuncun ama barar  
ilaa 1-2 maal mood ah iyo  
soo-buurnaan oo yara adag  
ilaa dhowr asbuuc ah.

### Waxa laga sameeyo guriga:

Haddii cunugu/ilmahu  
uu qabo qandho ha  
saarin dhar badan ama  
busteyaal. Paracetamol  
aya la siin karaa  
(iska hubi waxa ku qoran si aad wax  
sax ah u adeegsato).

Nuuji marar badan  
oo sii dureere  
dheeraad ah

Saar maro qoyan oo  
qabow meesha la  
durey

### Marka la dalbado talooyinka caafimaad:

Haddii xanuunka iyo  
qandhada ay dejin  
weydo Paracetamol  
(\_tus. Panadol®).

Haddii falcelisku aysan  
baxayn ama ka sii darayaan  
ama aad gebi ahaanba ka  
walwalsan tahay, markas ka  
dib u tag dhaqtarkaaga ama  
aad isbitaalka.

## **Waxyellooyinka dhinac socda tallaalka oo nadir ah kuwaas oo u baahan dareen caafimaad oo degdeg ah**

- Jaraynta Febrile-ka: waxaa sababa qandho sare, guud ahaan waxay ku dhacdaa ilmaha ka yar 3 sano.
- Ilmuu si kedis ah ayuu noqdaa mid midabkiisu baddalmo, luudaya oo garashadiisu aysan joogin 1 ilaa 48 saac tallaalka ka dib. Dabeedna dhaqso ayuu ilmuu si buuxda u soo doogaa.
- Owdanka mindhicirka (Intussusception) marka in mindhicirka ah gasho gudaha midhicirka ruuxadiis waxay dhacdaa oo ilmaha ku dhacdaa maalinta kowaad ilaa maalinta todobaad ka dib markii la siiyo tallaalka kowaad ama labaad ee rotavirus-ka. Calaamadaha owdanka walamadka waxaa ka mid ah:
  - oohin yar
  - muuqaalka oo isbedela (cadaada)
  - lugaha oo xaga caloosha ku dhega.
- Neerfaha gacanta oo olola (Brachial neuritis): taas oo sababta dareen tabardarro ama dareen laaan gacanta.
- Xasaasiyad daran (anaphylaxis) oo dhaqso u dhacda, badanaa 15 daqiqiyo gudahood laakkin waxay dhici kartaa saacad gudaheed marka tallaalka la samayo. Calaamado hordhaca ee anaphylaxis waxaa ka mid ah:
  - casaanka iyo cuncunka jidhka
  - dhibaatooyinka neefsiga
  - dareen walaac ah
- Guillain-Barre syndrome (GBS): waa xanuunka sababa barlayska oo marmarka qaarkoodna dareen laaan ah. Waagii hore waxaa lagu xiriiriyaa infuluwensada talaalkeeda si aad u yar haddayba dhaco.

**Haddey dhacdo waxyellooyinka la-socda tallaalka ama mid aan la filayn ah, waxaad kala xiriir kartaa adeega  
badbaadada tallaalka ee Victoria 1300 882 924 / [saefvic@mcri.edu.au](mailto:saefvic@mcri.edu.au) / [www.saefvic.org.au](http://www.saefvic.org.au)  
Adeegani ma bixiyo maaraynta degdega ah ee waxyel-looyinka la-socda tallaalka**

**Adeegga Fasiraadda iyo Turjumidda. Ka wac 131 450**

**Wixii macluumaad dheeraad ah:** La-xiriir dhaqtarkaaga ama adeegaaga tallaalka dowladda hoose ee deegaankaaga.

## Common side effects occur soon after vaccination and last 1 to 2 days

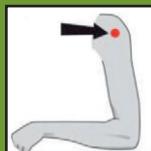

### Vaccinations may cause the following reactions:

Mild fever (<38.5 °C) that doesn't last long

Grizzly, unsettled, unhappy or sleepy

Where the needle was given: Sore, red, burning, itching or swelling for 1-2 days and/or small hard lump for a few weeks

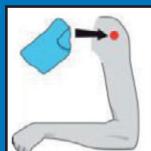

### What to do at home:

If baby/child has a fever do not have too many clothes or blankets on. Paracetamol can be given (check the label for correct use).

Breast feed more frequently and/or give extra fluids

Put a cold wet cloth on the injection site.

### When to seek medical advice:

If pain and fever are not relieved by paracetamol (eg. Panadol<sup>®</sup>).

If the reactions are not going away or getting worse or if you are worried at all, then see your doctor or go to hospital.

## Very rare vaccine side effects requiring immediate medical attention

- Febrile convulsion: caused by a high fever, generally occurs in children under 3 years of age.
- The baby suddenly becomes pale, limp and unresponsive from 1 to 48 hours after vaccination. Soon after the baby fully recovers.
- Bowel blockage (intussusception): occurs when a portion of the bowel slides into the next, like the pieces of a telescope. This can occur in a baby in the 7 days following the 1st and 2nd dose of rotavirus vaccine.  
Signs of bowel blockage include:
  - bouts of crying
  - pale appearance
  - pulling the legs up to the stomach.
- Inflammation of a nerve in the arm (Brachial neuritis): causes a feeling of weakness or numbness in the arm.
- A severe allergic reaction (anaphylaxis) occurring suddenly, usually within 15 minutes of vaccine administration but can occur within hours of administration. Early signs of anaphylaxis include:
  - redness and or itching of the skin
  - breathing problems
  - a sense of distress.
- Guillain-Barre syndrome: causes ascending paralysis and sometimes numbness. In the past it has been linked with influenza vaccine either rarely if at all.

**For significant or unexpected side effects following immunisation, you can contact the Victorian vaccine safety service on 1300 882 924 / saefvic@mcri.edu.au / www.saefvic.org.au  
This service does not give immediate emergency management for a side effect.**

Translating and interpreting service. Call 131 450
