TACO: TRANSFUSION ASSOCIATED CIRCULATORY OVERLOAD: Is your patient at risk?

**ASSESSMENT**

Does the patient have pre-existing cardiac dysfunction?
Is the patient on a regular diuretic?

Is the patient known to have pulmonary oedema?
Does the patient have any respiratory symptoms of undiagnosed cause?

Is the fluid balance positive?
Is the patient receiving continuous IV fluids (current or within last 24 hours)?
Is there any peripheral oedema?

**MONITORING**

Signs and symptoms of TACO – what to watch for:

- Dyspnoea, SOB
- Orthopnoea
- Cyanosis
- Tachycardia
- Pedal oedema (foot swelling)
- Hypertension
- Rales on auscultation

- Chest tightness
- Dry cough
- Positive fluid balance
- Pink, frothy sputum

**PREVENTION**

If YES to any of the above:

- Review the need for transfusion, should/can it be deferred?
- Transfuse one unit and review.
- Administer at a slow rate.
- Measure the fluid balance.
- Consider a prophylactic diuretic.
- Monitor the patient closely

**TREATMENT**

If signs and symptoms occur:

- STOP the transfusion
- Assess patient
- Emergency call if meet criteria
- Contact the medical officer
- Treat the patient as directed
- Report via usual hospital mechanisms

Based on SHOT TACO checklist 2015
