### Respiratory Rate
- **Normal (per page 3)**: 16-22 breaths per minute
- **Tachypnea (per page 3)**: >22 breaths per minute
- **Bradynea (per page 3)**: <16 breaths per minute

### Respiratory Distress
- **Mild**: Hypoxia, cyanosis, tachypnea, but patient is conscious
- **Moderate- Severe**: Hypoxia, cyanosis, tachypnea, hypotension, altered mental status
- **Life Threatening**: Hypoxia, cyanosis, tachypnea, severe hypotension, respiratory arrest

### Blood Pressure (mmHg)
- **Systolic BP is the trigger**

### Heart Rate (beats / min)
- **Normal (per page 3)**: 60-100
- **Tachycardia (per page 3)**: >100
- **Bradycardia (per page 3)**: <60

### Temperature (°C)
- **Normal (per page 3)**: 36.5 - 37.5
- **Increased (per page 3)**: >37.5
- **Decreased (per page 3)**: <36.5

### Pain Scale
- **0-10**
- **None**
- **Mild**
- **Moderate**
- **Severe**

### Fundal Tone
- **Soft**
- **Hard**
- **Taut**

### Postnatal Fundal Height (Refer to umbilicus)
- **2 cm above umbilicus**
- **1 cm above umbilicus**
- **At umbilicus**
- **Below umbilicus**

### Postnatal Lochia
- **Offensive**
- **Heavy loss**
- **Moderate loss**
- **Minimal loss**
- **Pad changed**

### Looks Unwell
- **Yes**
- **No**

### O2 Saturation (%)
- **95-100**
- **86-94**
- **<85**

### O2 Flow
- **3-6 L/min**
- **1-2 L/min**

### Emergency Call
- **Actions Required for MET**
  - Call a MET call
  - Inform midwife in charge
  - MET team responds within 3 minutes
  - Attending doctor to ensure Consultant informed

- **Actions Required for Code Blue**
  - Call a Code Blue
  - Code Blue team arrives within 3 minutes

- **Actions Required for Code Pink**
  - Call a Code Pink
  - Consider need for Code Blue/Code Pink dual code

### Medical Review
- **Response Criteria for Code Blue**
  - Any acute airway concerns
  - Cardiac or respiratory arrest
  - Unconscious collapse

- **Response Criteria for Code Pink**
  - Patient meets Code Pink criteria

### If no improvement or more than one observation in an orange area:
- **Notify Obstetric Registrar/Consultant to attend within 15 mins**
**Maternity Observation and Response Chart (MOC)**

**Antenatal Care Pathway (OCG)**

</table>

**Modifications**

- If abnormal observations are to be tolerated for the woman’s clinical needs, write the acceptable ranges (where a response will not be triggered) below.
- Modifications must be reviewed at least every 24 hours.
- If any vital sign needs further modification, draw two diagonal lines through the entire Modification record in use and write the new acceptable ranges in the next Modification record.

**General Instructions**

- You must record appropriate observations:
  - On admission
  - At a frequency appropriate to the woman’s clinical needs
    Please note even if a woman’s observations are within the white zone this may be abnormal for her.

- You must record a full set of observations relevant to pre or post birth:
  - If the woman is deteriorating or an observation is in a shaded area.
  - Whenever you are concerned about the woman or she looks unwell.

- When graphing observations, place a dot (*) in the centre of the box that has the current observation in its range of values and connect it to the previous dot with a straight line. For blood pressure, use the symbol indicated on the chart.

- Whenever an observation falls within a shaded area, you must initiate the actions required for that colour, unless a modification has been made (see Modifications above).

- If observations fall within both purple and orange coloured areas for the same time period, the actions required for the purple area apply.

- A Comments Code can be used more than once if the same descriptor applies. e.g. Code 9 - wound clean & dry, IV patent, IVD patent and draining”
