Experiences of Care Survey

Are you completing this questionnaire as the patient or on behalf of the patient?

Patient □₁  On behalf of patient □₂

This survey is about the care you received during your cancer treatment.

Taking part in this survey is voluntary. Your responses are confidential. They will be combined with the responses of others in reports.

Completing this survey:

For most questions there is a choice of answers. Pick the response that is true for you and tick the box next to it. Sometimes, more than one box may be ticked. If you make a mistake, scribble out the mistake and put a tick in the correct box.

There is space throughout the survey for you to make any comments about your care. There is also space at the end of the survey for any comments you want to make.

The instructions before the questions will tell you who should answer the questions. You may be able to skip questions if you haven’t had particular treatments (e.g. radiotherapy, chemotherapy).

You may not have had treatment in the order presented in the survey.

The survey may take 30 minutes to complete, depending on what treatment you have had.
A tab on the top outside corner of each page tells you what section of the survey you are in. Sections with coloured tabs are about different treatments. The colours for the different sections are shown below:

- **FINDING OUT**: Pages 3-4
- **DECIDING**: Pages 5-6
- **SURGERY**: Pages 7-10
- **RADIOThERAPY**: Pages 11-14

**Words used in the survey:**

We have used certain words or terms throughout the survey. The following may help to explain what we mean by these terms.

- **Health professionals**: includes doctors, nurses, radiologists, radiotherapists, care coordinators, physiotherapists, dietitians, speech pathologists, social workers and other professions that you may have had contact with during your treatment.

- **Chemotherapy**: is the use of drugs that aim to destroy cancer cells in the body, or to stop them from multiplying and spreading. For this survey, **targeted therapies** are included with chemotherapy. Targeted therapies are drugs or other substances that block the growth and spread of cancer by interfering with specific molecules. Chemotherapy and targeted therapies can be given through a drip that goes into a vein via a needle, as a tablet that you swallow, or as cream that’s put on the surface of the skin.

- **Radiotherapy**: is the use of radiation to destroy cancer cells in the body, to slow the growth of cancer, or to reduce the symptoms of cancer. External beam radiotherapy is given using a machine that directs radiation onto the body. Radiotherapy can also be given internally using radioactive implants, which is known as brachytherapy.

- **Hormonal therapy**: aims to control a cancer by changing the hormonal environment in which it is growing. This treatment is used most commonly for breast, ovarian, endometrial and prostate cancer but can be used for some other cancers as well. Treatments can be given by injections into a vein or as a tablet.

- **Lymphoedema**: is a swelling (oedema) due to an accumulation of lymphatic fluid in the body’s tissues. It usually affects the arm(s) or leg(s) but can also occur in other parts of the body. Lymphoedema can occur following some cancer treatments.
