#### FOR DOCTORS AND MIDWIVES

**Give the VMR to women at their first visit** after the pregnancy is confirmed. Ask her to read the instructions. Remind her to bring her VMR to every visit.

**Discuss it** at the first visit. If a woman does not want to carry it or you recommend that she does not carry it (as may occur in situations of homelessness or mental illness), document on p1. Continue to use the VMR but keep it with your records. Women in Shared Care arrangements must be willing to carry the VMR throughout pregnancy.

#### Complete history, order tests and investigations and Visit 1

In some places this is done by the same doctor or midwife at the one appointment, at others it is completed by different people at the same appointment or by different people over several appointments. You must routinely add copies of pathology or radiology reports to the VMR.

Write in it/add to progress notes at every subsequent visit. Fill out the information in the space provided unless you/your health service have chosen to attach information eg antenatal progress notes from Medical Director or BOS, or preadmission information.

Sign it at every visit.

	Signification of the state of t

#### INSTRUCTIONS FOR WOMEN

#### You need to:

Bring the VMR to every appointment.

Write in it Record personal details, appointments and classes, waiting times – when you arrived and were seen, your questions, any phone calls made to your doctor or midwife/hospital and your birth plan.

**Read it** and ask about things you don't understand. See the glossary at the back for definitions. Read the consumer information booklet that comes with this record for explanation of common tests and investigations.

Keep it safe at home.

Carry it at all times towards the end of pregnancy so that it is with you when you go into labour or if you have an emergency trip to the hospital.

**Don't throw it out** after the baby is born. You get to keep the original. It is your story and it is a very useful reference for your doctor or midwife if you get pregnant again.

#### Frequently asked questions (FAQs)

What if I don't want to carry it? If for any mason you choose NOT to carry this record then tell your doct in or including. They will keep it instead OR just use a pir or in lect rd.

I want to carry it but I am worried about privacy of certain information eg drug use, previous pregnancies or test results. Tell your midwife or doctor. They will record sensitive info somewhere else.

What if I forget it? Wherever possible you (or a friend/relative/partner) should go home and get it.

What if I lose it? You will probably be given another record but some valuable information MAY be lost.

Is this the only record? This record is not the only record of your care. Hospitals and private loctors/midwives keep and store your info in their own per ord for clinical and legal purposes.

Is this the whole record? This isn't an exact copy of the hospital or private practice legard eg it does not have every chart or note legar partogram) made during labour or any operation you may have. If you want to, you can request a copy of this information under the Freedom of Information Act 1982.

Why isn't n electronic? Hospitals and community health centres vary hugely in the way they store and share health information with each other and with women. At this stage your information can't be shared electronically because systems are not compatible. The long-term plan for Victoria is to develop an e-record to share and store your maternity information. This is the first step.

# YOUR PHONE CALLS For recording any phone alls made to a doctor or midwife about your pregnancy or labour Spoke to Reason/Advice given Date Time YOUR QUESTIONS

### The meaning of words used in this record

You can find full, clear explanations and information on how and why tests and investigations are offered to you in the consumer information book that comes with this record – or go to www.health.vic.gov.au/maternity

**Accoucheur** Person who helps you give birth.

AF Artificial feeding.

**Amniocentesis** Sample of fluid from around the baby obtained via fine needle into womb. This test detects genetic abnormalities.

**Anti D** Injection given to Rhese's negative mother's to prevent Rhesus disease in her baby.

**Apgar score** A scoring system to check your baby's health. Measured at 1 and 5 minutes after birth.

**ARM** Artificial Rupture of Membranes. When your midwife or doctor breaks the bag around the baby and lets out the water surrounding the baby to bring on your labour.

**Auscultation** Listening to your baby's heartbeat.

**BMI** Body mass index is a guide to whether you are a health weight for your height. It is calculated by dividing your weight by the square of your height.

**BF** Breastfeeding.

**BP** Blood pressure.

**Caesarean** when the baby is delivered by the doctor cutting into the uterus through your tummy.

**Cervix** Opening of the womb into the vagina. Sometimes called the neck of the womb.

**Colostrum** the first milk. Is what the breastfed baby receives in the first few days following birth. It is especially important and provides nutrition and protection for the baby against infectious diseases.

**Combined screening** the results from a blood test and an ultrasound are combined with your age to determine your baby's risk for Down Syndrome.

**Consanguinity** describes a relationship between two people who share a common ancestor: a 'shared blood' relationship or marriage between first cousins.

**CTG** Cardiotocograph. Monitors the baby's heartbeat and your contractions in pregnancy and labour.

**Domiciliary** means 'at home', usually refers to home visits.

EDB Estimated date of birth.

Also known as estimated birth date (EBD) and estimated date of delivery (EDD).

**Epidural** An injection into your back that numbs the lower part of your body and relieves pain in labour and birth.

**Episiotomy** an incision of the perineun (tissue between the vagina and the acus to enlarge the vaginal opening during birth. This is stitched following the bir n.

**Ex** Examination.

FBE Full clood examination. A blood trust that chacks for many different things including maemia [low iron] and infection.

F. IR Tetal heart rate.

FM Fetal movement.

**Forceps** a special instrument placed around the baby's heal, inside the vagina to help guide the baby out during delivery.

**Fundal height** Size of your uterus [womb] - a measure of your baby's growth.

**G** Gravida, the number of times you have been pregnant.

**GCT/GTT** Blood tests to see how your body is using sugar. A GCT stands for glucose challenge test. A GTT stands for glucose tolerance test.

Genetic inherited, hereditary.

**Gestation** The number of weeks you have been pregnant.

**Group B Streptococci (GBS)** refer 'A guide to tests and investigations' booklet.

**Hep B/HepBsAg** Blood test for Hepatitis B/Hepatitis B surface antigen.

Hep C Hepatitis C.
